Proteins induced by telomere dysfunction are associated with human IgA nephropathy. *J. Zhejiang Univ.-Sci. B (Biomed. & Biotechnol.)*, **15**(6):566-574. [doi:10.1631/jzus.B1300115]

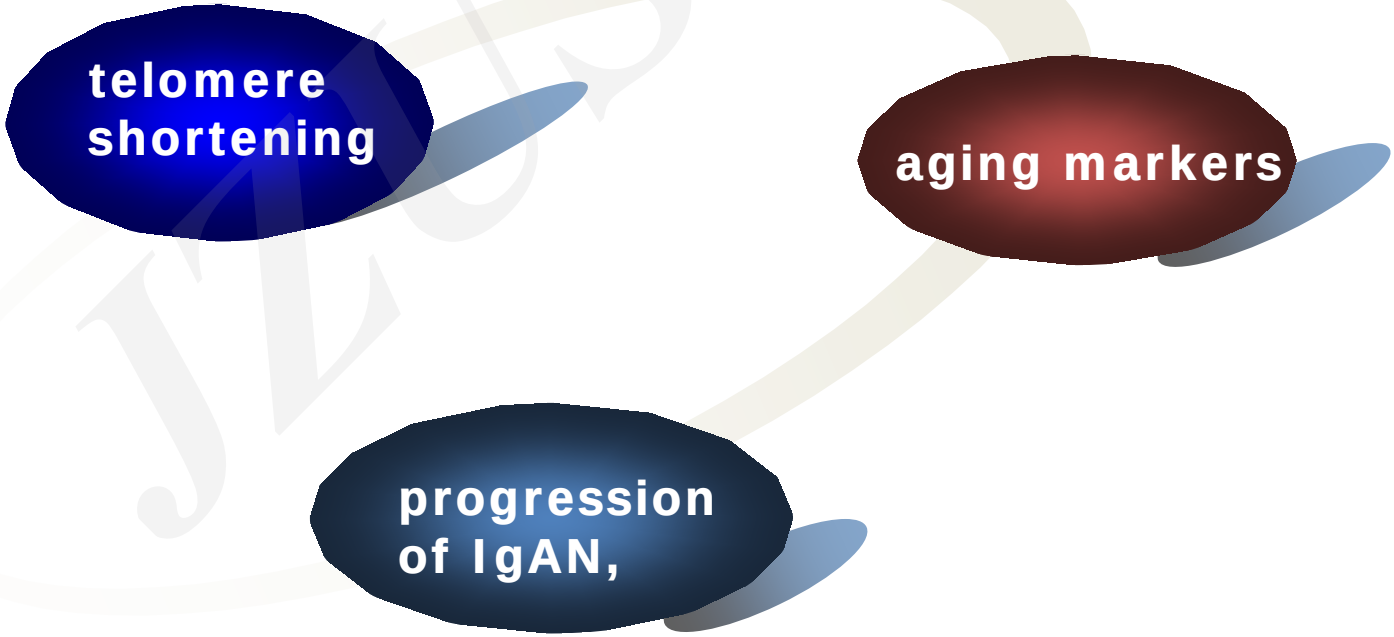

Proteins induced by telomere dysfunction are associated with human IgA nephropathy

Key words: Biomarkers, Telomere, IgA nephropathy (IgAN)

JZUS-B

Research Summary

This study focused on the relationship between these biomarkers and IgA nephropathy (IgAN) progression in the Chinese population.

Conclusion

The recently identified biomarkers can be described as an effective indicator of human IgAN progression which is correlated with telomere dysfunction.
