Proteins induced by telomere dysfunction are associated with human IgA nephropathy. *J. Zhejiang Univ.-Sci. B (Biomed. & Biotechnol.)*, **15**(6):566-574. [doi:10.1631/jzus.B1300115]

# **Proteins induced by telomere dysfunction are associated with human IgA nephropathy**

**Key words: Biomarkers, Telomere, IgA nephropathy (IgAN)**

# *Research Summary*

**This study focused on the relationship between these biomarkers and IgA nephropathy (IgAN) progression in the Chinese population.**

## *Conclusion*

**The recently identified biomarkers can be described as an effective indicator of human IgAN progression which is correlated with telomere dysfunction.**
