# **MicroRNAs in breast cancer: oncogene and tumor suppressors with clinical potential**

## **Key words:**

Breast cancer, MicroRNA, Oncogene, Tumor suppressors, Diagnosis marker, MicroRNA-based therapies

# Research Summary

This review mainly focus on the functions of specifically selected microRNAs in breast cancer , and assess the potential value of these microRNAs with clinical potential.

# ***Innovation points***

- **Table 1:** Summary information about oncogenic microRNAs associated with breast cancer.
- **Table 2:** Summary information about tumor suppressive microRNAs associated with breast cancer.
- Based on published data, a probability analysis for microRNAs to be diagnosis and prognosis markers has been done.
- The ending part of this review states the prospects and main challenges for microRNA-targeted therapy in breast cancer.
