Diagnosis and treatment of allergic diseases in Zhejiang Province: a cross-sectional survey

Key words: Allergy, Diagnosis, Treatment, Allergen-specific immunotherapy

Research Summary

This study aims to investigate the working status of the diagnosis and treatment of allergic diseases in Zhejiang province, and mainly focuses on the following aspects:

- Doctor resources for allergic diseases
- Performance of diagnostic methods
- Performance of treatments
- Area variations of the specialty development

Innovation points

- **Introduction** of real working status of the diagnosis and treatment of allergic diseases in Zhejiang province.
- **Summary** of a very initial and unbalanced development for the allergy subspecialty in Zhejiang province.
- **Emphasis** of doctor resource and performance of diagnostic methods and treatments for allergic diseases.

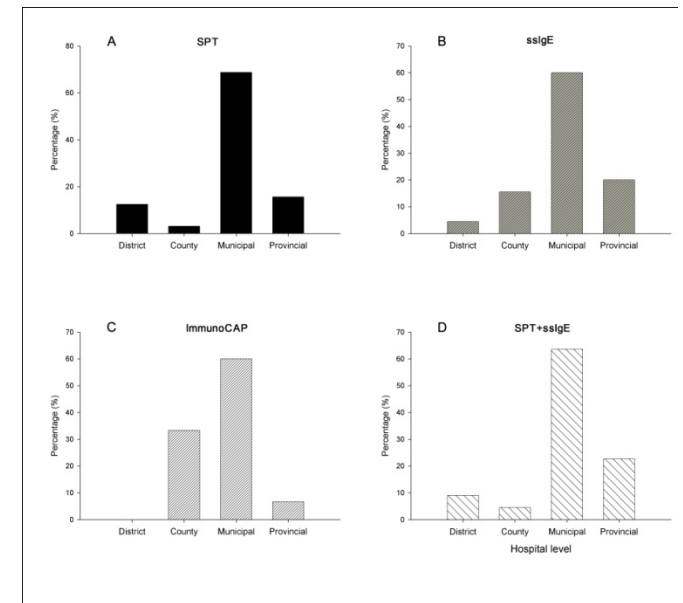

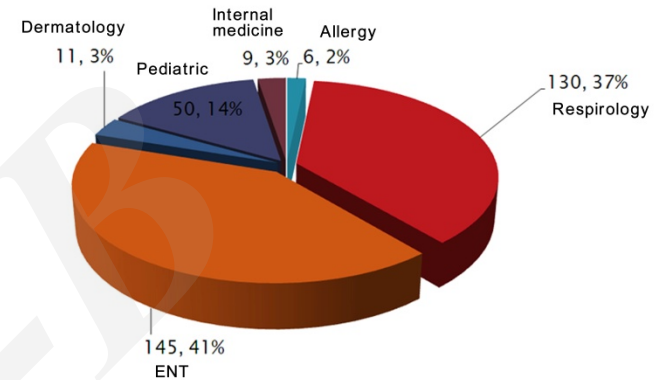

Figure 4

Innovation points

A series of comprehensive figures were generated to summarize the working status of the diagnosis and treatment of allergic diseases.

Figure 1 | General characteristics and distribution of doctors.

Figure 2 | Characteristics of doctors working in allergic diseases in the specialties of Respiriology, ENT and Pediatrics.

Figure 3 | Carryout of allergen measurements and allergen specific immunotherapy.

Figure 4 | Carryout of diagnostic methods in hospitals at different levels.

Figure 5 | Carryout of diagnostic methods in hospitals from different areas.

Figure 6 | Carryout of treatments in hospitals at different levels.

Figure 7 | Carryout of treatments in hospitals from different areas.
