Involvement of microRNA-718, a new regulator of EGR3, in regulation of malignant phenotype of HCC cells. *Journal of Zhejiang University-Science B (Biomedicine & Biotechnology)*, 18(1):27-36. http://dx.doi.org/10.1631/jzus.B1600205

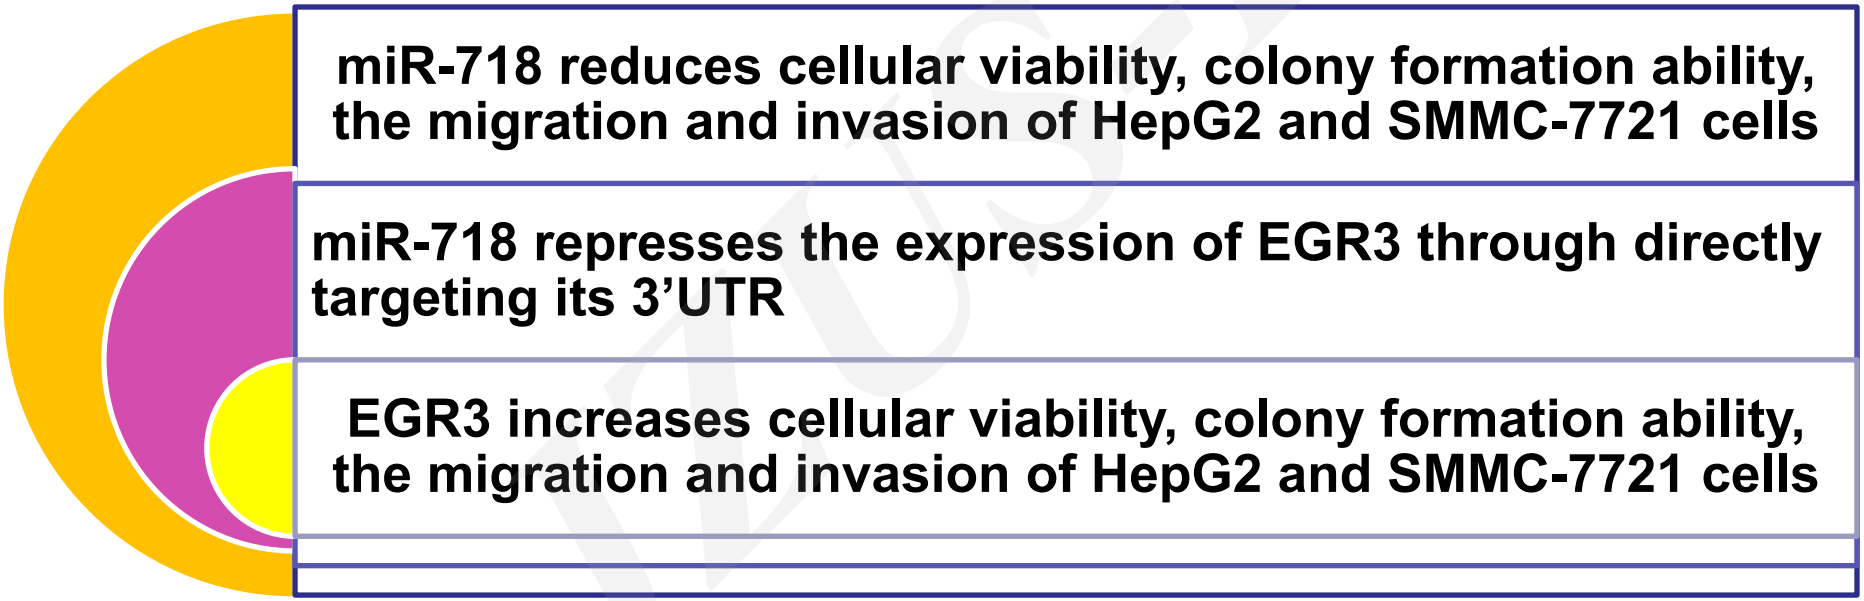

Involvement of microRNA-718, a new regulator of EGR3, in regulation of malignant phenotype of HCC cells

Key words: miR-718; MicroRNA; EGR3; HCC; Malignant phenotype

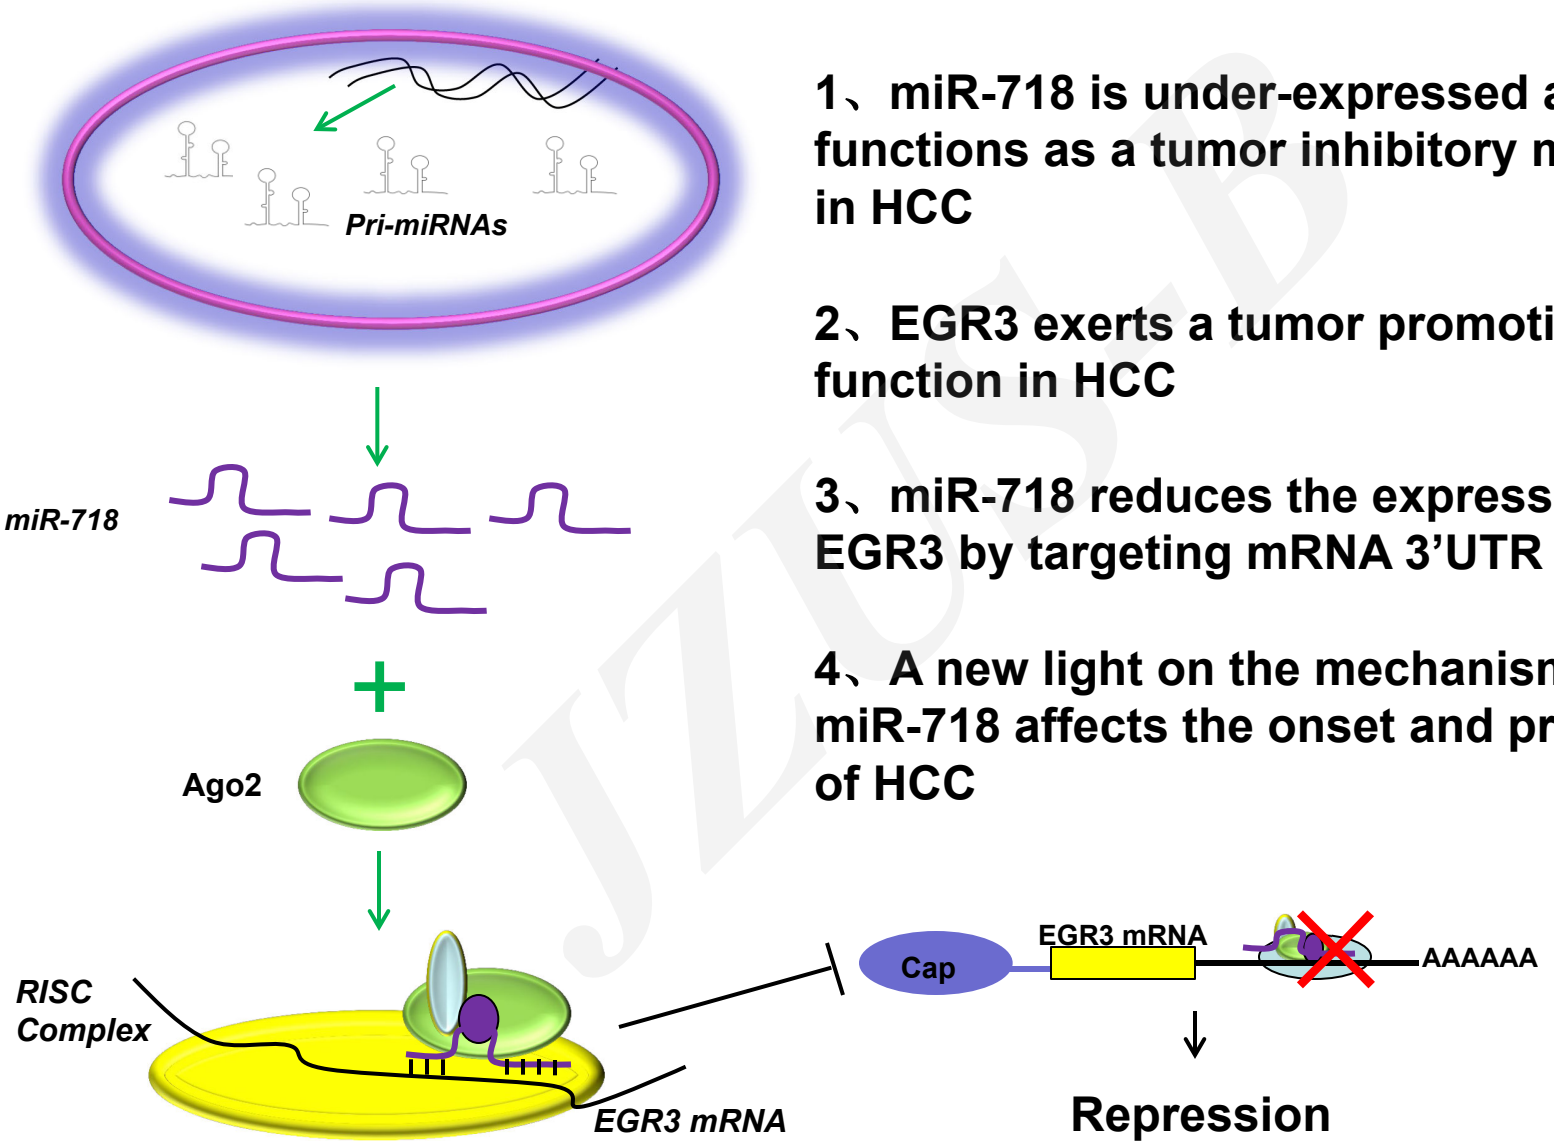

JZUSB

Research Article

This manuscript mainly focused on the role of miR-718 and EGR3 in HCC cells, and summarized the key roles they played in the following aspects:

Innovation points

1、miR-718 is under-expressed and functions as a tumor inhibitory microRNA in HCC

2、EGR3 exerts a tumor promoting function in HCC

3、miR-718 reduces the expression of EGR3 by targeting mRNA 3'UTR

4、A new light on the mechanism of how miR-718 affects the onset and progression of HCC
