Isolated superior mesenteric artery rupture caused by abdominal trauma

Key words: **Blunt abdominal mesenteric injury; Superior mesenteric artery injury; Super-selective embolization**

Innovation points

This unique case report describes a patient with a ruptured isolated superior mesenteric artery caused by a rebar accident.

timeline

JCUS-B

Innovation points

Lesson 1

Isolated mesenteric injuries should be considered in any patient presenting with blunt abdominal trauma.

Lesson 2

SSE may be a promising therapy to treat mesenteric injuries, on account of the reduction in major complications and recurrent bleeding.
