Multidisciplinary approach for the management of term pregnancy complicated by Eisenmenger syndrome

Key words: **Term pregnancy, Eisenmenger syndrome, Severe pulmonary hypertension, Multidisciplinary team (MDT)**

Research Summary

We report one case of Eisenmanger's syndrome in term pregnancy in our hospital, and the pregnant women with severe pulmonary artery hypertension (135mmHg) delivered the baby by selective cesarean section under the precision management of a multidisciplinary team.

JZUSB

Clinical significance

●Pregnant patients with ES should be treated carefully by an experienced MDT.

● PAH-specific therapy should be initiated or continued during pregnancy.

●Precise and standardized management by MDT profoundly improved maternal and fetal outcomes.
