Early developmental levels of children with autism spectrum disorder with different adaptive behaviors: a retrospective analysis

Key words: **Autism spectrum disorder; Child; Adaptive behavior; Early developmental level; Individualized intervention**

Research summary

This paper focuses on the relationship between adaptive behavioral skills and early developmental levels in children with autism spectrum disorders (ASD). The paper contains the following main sections:

- Adaptive behavioral skills in children with ASD
- Early developmental levels of children with ASD
- The impact of age and gender on the development of children with ASD

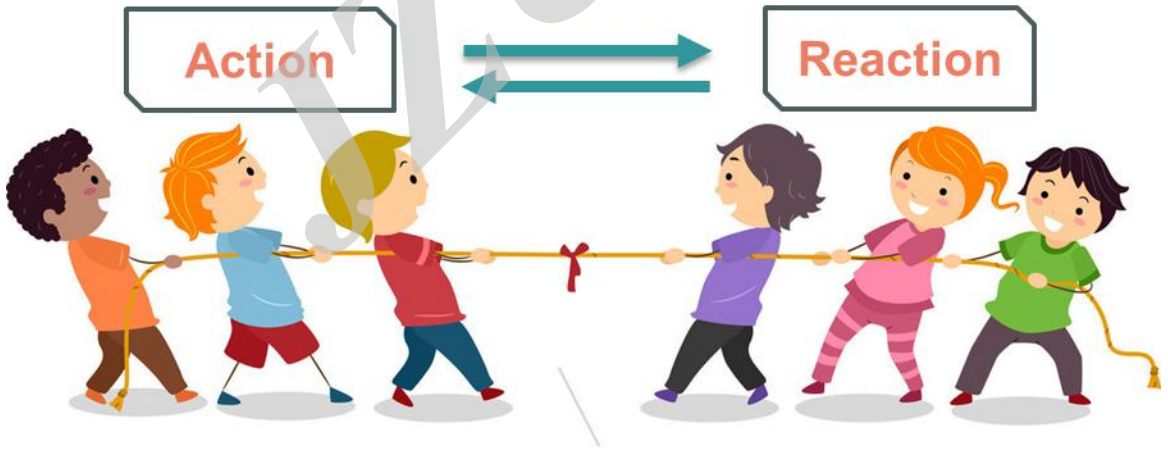

JZUS-B

Innovation points

- **Explores** how to promote autism awareness and culture on Autism Awareness Day.
- **Supporting** autism with services, inclusion, and advocacy.

- **Not** normalizing mean DQs in the adaptive, gross motor, fine motor, language, and personal social activities domains was a feature of the early development of children with ASD.

IZUS-B

Innovation points

The following tables contain the early developmental levels of children with autism spectrum disorders who have different adaptive behaviors

Table 1 | Development levels and influencing factors of different GDS domains in children with ASD.

Table 2 | Adaptive function and influencing factors of children with ASD.

Table 3 | The influence of age and adaptive function on different developmental domains of children with ASD.

Table 4 | Correlation matrix of developmental levels and factors influencing different developmental domains.
