Repetitive transcranial magnetic stimulation combined with imaginal exposure therapy for adolescents with acute stress disorder: case report

JZUS-B

Key words: rTMS,Imaginal exposure, Adolescents, Acute stress disorder, Case report

Research Summary

These cases suggests that integration of rTMS and imaginal exposure may hold promise as a therapeutic strategy for adolescents with acute stress disorder:

JZUS-B

Innovation points

- **Introduction** **of the effect of combination therapy for adolescents with acute stress disorder.**

- **Summary** **of the rTMS combined with imaginal exposure for treating acute stress disorder or posttraumatic stress disorder.**

- **Emphasis** **of the exploration value and feasibility of rTMS combined with imaginal exposure therapy.**
