A frequency domain design of PID controller for an AVR system

Key words: Automatic voltage regulation (AVR), PID controller, Frequency response matching

Introduction

- The proportional-integral-derivative (PID) controller with its variants is the most widely accepted controller for industrial applications.
- The automatic voltage regulation (AVR) systems continuously adjust the field excitation to maintain the generator terminal voltage at a specified level.
- Numerous PID controllers for the AVR system are available in the literature.
- A new PID controller design method based on approximate frequency response matching has been presented in this paper.

Design method (I)

$$G_p(s) = \frac{K_A K_E K_G}{(1 + \tau_A s)(1 + \tau_E s)(1 + \tau_G s)}$$

$$\text{Desired reference model: } M_{r,y}(s) = \frac{P(s)}{Q(s)}$$

For frequency response matching between the designed and the desired systems,

$$G_{r,y}(s) \Big|_{s=j\omega} = \frac{C(s)G_p(s)}{1 + C(s)G_p(s)F(s)} \Big|_{s=j\omega} \cong M_{r,y}(s) \Big|_{s=j\omega}$$

Design method (II)

The controller comes out:

$$C(s)\Big|_{s=j\omega} \cong \frac{M_{r,y}(s)}{G_p(s)[1 - M_{r,y}(s)F(s)]}\Big|_{s=j\omega}$$

$$= \frac{P(s)(1 + \tau_A s)(1 + \tau_E s)(1 + \tau_G s)(1 + \tau_s s)}{K_A K_E K_G [Q(s)(1 + \tau_s s) - P(s)K_s]}\Big|_{s=j\omega} = H(s)\Big|_{s=j\omega}$$

$H(s)$ is approximated by the PID controller $C(s)$ through frequency response matching at two low frequency points ω_0 and ω_1 as given by

$$A\bar{x} = \bar{b} \quad A = \begin{bmatrix} 1 & 0 & 0 \\ 0 & -1/\omega_0 & \omega_0 \\ 1 & 0 & 0 \\ 0 & -1/\omega_1 & \omega_1 \end{bmatrix},$$

$$\bar{x} = [K_P \quad K_I \quad K_D]^T$$

$$\bar{b} = [H_R(\omega_0) \quad H_I(\omega_0) \quad H_R(\omega_1) \quad H_I(\omega_1)]^T$$

$$\text{where } H_R(\omega) + jH_I(\omega) = H(s)\Big|_{s=j\omega}$$

Simulation results

Conclusions

- A new frequency domain model matching method has been described for the design of a PID controller for an AVR system.
- The method does not require any elaborate frequency response analysis or mathematically involved optimization technique.
- The method is mathematically simple and its computational burden is very small.
